Make sure the dataset "movie_metadata.csv" is in the same directory as the model.

Ensure the Python library "sklearn" installed before running the model.

Ensure the latest versions of Matplotlib, NumPy, and Pandas are installed as well.

Run the file and the model will be trained and tested on the dataset.

To update the model to remain accurate for the newest films, add the newest movies to the dataset, matching the corresponding features, then retrain the model on said movie dataset. The model requires updating roughly every 2 years.
